Portfolio

PROFILE SUMMARY

Software Development Engineer II with nearly **3 years of experience** specializing in **Backend Engineering, Backend Architecture and System Design** across FinTech, enterprise & financial systems, with expertise in **Java, Spring Boot, Ruby on Rails, REST APIs, Oracle, PostgreSQL & Redis**. Proven track record of solving complex production problems, engineering 20+ APIs and ~30-table data models, improving backend performance by ~60%, and delivering secure, reliable integrations serving 25K+ users. Currently leading a 5-member backend team and mentoring 2 engineers/junior engineers, with strengths spanning API security, asynchronous processing, database optimization, third-party integrations and production engineering.

TECHNICAL SKILLS

- Languages:** Java, Ruby, SQL
- Backend:** Spring Boot, Ruby on Rails, REST APIs, API Design, Microservices, Background Jobs, Async Processing, Feign, SSE
- Cloud & AI:** AWS, Prompt Engineering, LLM Integration, AI Agent Development, Agentic Workflows, AI Guardrails
- Engineering Practices:** Data Structures, CI/CD, Code Reviews, Agile
- Databases:** Oracle, PostgreSQL, Redis, Database Design
- Security:** OAuth 2.0, MFA, PingOne, Rate Limiting, Secrets Management, API Encryption
- Integrations & Tools:** Razorpay, Leegality, Aadhaar, Udyam, GSTIN, PAN-to-CIN, TIN, Git, GitLab, Docker, AppSignal, Swagger, Bruno, Claude Code

CORE COMPETENCIES

Backend Architecture & Development, System Design, Database Optimization, API Integration, Authentication & Security, Asynchronous & Concurrent Processing, Performance Engineering, Production Engineering, Troubleshooting, Incident Management, Financial Systems, Technical Leadership

WORK EXPERIENCE

ROOTQUOTIENT TECHNOLOGIES | Chennai, India

Growth Path: Software Development Engineer- Intern (Jul 2022–Dec 2022; Jan 2024–Jun 2024) → Software Development Engineer-I (Jul 2024–Jul 2026) → Software Development Engineer-II (Aug 2026–Present)

Key Projects: Employee Retirement Management | Digital Loan Origination | Aviation Carbon Management

- Led a 5-member backend team across architecture, technical decision-making, client discussions, **Agile delivery, code reviews, CI/CD practices, & engineering standards**; mentored 2 engineers in Ruby on Rails & 2 junior engineers in Spring Boot, backend design, code quality, & domain standards.
- Architected configurable **13-step digital lending/financial workflow** with **30 Oracle tables, 20+ APIs, 12 verification types/8 implementations**; designed configurable step workflow using step master & user mapping to enable dynamic step order/status changes without modifying existing mappings, support journey resumption from persisted state, and maintain ~90% core-schema stability
- Optimized 1K+ record retirement queries** using EXPLAIN, benchmarking, indexing and targeted columns; reduced response time 60%, resolved N+1 queries and added AppSignal monitoring
- Secured 3 public flows with lockout after 4 failures, IP throttling after 9 attempts/30-minute** cooldown and session controls across 5 user types; handled OAuth/PingOne/OLS authentication and PII encryption
- Resolved P0/P1 issues with same-day workarounds** and permanent fixes in 2–3 days; diagnosed PingOne/OLS inconsistencies across 25K+ users, identifying 1K impacted accounts and password-reset/expiry divergence
- Automated credential rotation across **3 repositories, 5 environments and 15 credential files** using Rake, reducing manual effort 60–70%; secured runtime credential storage and Redis-backed 10-minute OTP handling
- Reduced applicant data entry by 40% through API-based prefill and orchestrated 5 third-party integrations using requestUUID, Redis, frontend polling, and Feign; implemented **Razorpay payment integration with idempotent webhooks**, SSE, Leegality e-sign, and verification APIs.
- Achieved 98% backend test coverage**; introduced Dockerized Oracle development, Swagger/Bruno API testing and Claude-assisted encryption wrappers for FE-to-backend PII requests/responses; developed production features/fixes using Ruby on Rails and Spring Boot

PERSONAL PROJECT

- Department Meeting Scheduler, Java, Spring Boot, PostgreSQL, GitHub**
Built a faculty meeting scheduler with conflict prevention, notifications & calendar management; reducing manual coordination from hours to seconds.
- QueryPilot AI — AI-Powered Database Query Optimization Advisor, Java, Spring Boot, PostgreSQL, Docker, LLMs, GitHub**
Built an AI-powered SQL optimization platform that analyzes execution plans, identifies bottlenecks, recommends query/indexing improvements, and validates gains through sandboxed before/after performance testing.

CERTIFICATIONS

- [Building with the Claude API](#) - 2026
- [Claude Code in Action](#) - 2026
- [AWS Certified Cloud Practitioner](#) - 2025

AWARDS

- Above and Beyond & In Honor of Making Impact- RootQuotient Technologies

EDUCATION

- Master of Science (Computer Science)** from College of Engineering Guindy, Anna University, 2019–2024; Gold Medal for Proficiency
